	when opening the door, Machine stop for continuous absence of bottles at screw feeder , Formula generation, recording & invocation, Contains a set of 5ml bottle mould, filling rate : at least 5000bph. Should be supplied with all essential parts 2.The TBL Vertical bottle Labeling Machine and printing component (European brand) General Information: Should be suitable for the full-circle or semi-circle labeling of 2 to 500ml glass/ plastic bottle labeling, with a capacity of 6000 bph (depending on the diameter of the bottle). Working Principle: The labeling machine is connected online with the upstream process, feeding bottles to the conveyor belt. Upon reaching the bottle detection electric eye, it triggers a signal to the label feeder. The bottle is stucked with a label when passing by the label feeding plate and the label is then rolled on the bottle surface when the roller belt rotates the bottle, while the backing paper is rolled back. Once the label detection electric eye detects the end of the label, it sends a stop signal to the label feeder, completing
--	---

	the labeling process. The label feeder is driven by a servo motor, and label feeding is closed-loop controlled. The label feeding accuracy can reach $\pm 0.2\text{mm}$, and the label feeding speed can reach 60m/min; the maximum can reach 100m/min (customized design). Servo label feeding system is adopted to complete labeling without bottle separating. The speed of the conveyor belt can be greatly reduced. With the same speed of the labeling, we can make the bottle in the conveying process more stable, and improve the labeling accuracy; there will be no bottle falling, which can greatly improve the labeling speed. The drive roller of the label feeder is designed with an emery structure, ensuring accurate labeling with a compact and convenient design for label changes. 23.	Prices	23.1	The contract price shall be as specified in the Contract Agreement Subject to any additions and adjustments thereto or deductions there from, as may be made pursuant to the Contract.
		23.2	Prices charged by the Supplier for Goods delivered and Services performed under the Contract shall not vary from the prices quoted by the Supplier in its

			Tender, with the exception of any price adjustments authorized in SCC or in the Purchaser's request for Tender validity extension, as the case may be.
		23.3	Prices payable to the Supplier, if subject to adjustment during performance of the Contract to reflect changes in the cost of labour and material components shall be done in accordance with the formula shown by GCC 23.4.
		23.4	Price Adjustment Formula If in accordance with GCC 23.2 and 23.3, prices shall be adjustable, the following method shall be used to calculate the price adjustment: Prices payable to the Supplier, as stated in the Contract, shall be subject to adjustment during performance of the Contract to reflect changes in the cost of labour and material components in accordance with the formula: $P1 = P0 [a + bL_1/L_0 + cM_1/M_0] - P0$ Whereby $a+b+c = 1$ in which: P1 = adjustment amount payable to the Supplier. P0 = Contract Price (base price). a = fixed element representing profits and overheads included in the Contract Price and generally in the range of five (5) to fifteen (15) percent. b = estimated percentage of labor component in the contract price.

			c = estimated percentage of the material component in the Contract Price. L0, L1 = *labor indices applicable to the appropriate industry in the country of origin on the base date and date for adjustment, respectively. M0, M1 = *material indices for the major raw material on the base date and date for adjustment, respectively, in the country of origin. The Bidder shall indicate the source of the indices and the base date indices in its bid. The coefficients a, b, and c as specified by the Purchaser are as follows: a = [insert value of coefficient] b= [insert value of coefficient] c= [insert value of coefficient] Base date = thirty (30) days prior to the deadline for submission of the bids. Date of adjustment shall be the the mid-point of the period of manufacture. The above price adjustment formula shall be invoked by either party subject to the following further conditions: (a) No price adjustment shall be allowed beyond the original delivery dates. As a rule, no price adjustment shall be allowed for periods of delay for which the Supplier is entirely responsible. The Purchaser will, however, be entitled to any decrease in the prices of the Goods and Services subject to adjustment. (b) If the currency in which the Contract Price P0 is
--	--	--	---

			expressed is different from the currency of origin of the labour and material indices, a correction factor will be applied to avoid incorrect adjustments of the Contract Price. The correction factor shall be Z_0/Z_1, where Z_0 = the number of units of currency of origin of the indices which equal to one unit of the currency of the Contract Price on the Base Date; and Z_1 = the number of units of currency of origin of the indices which equal to one unit of the currency of the Contract Price on the Date for Adjustment. (c) No price adjustment shall be payable on the portion of the Contract Price paid to the Supplier as advance payment.
24.
